

ClinicPro PCS is Horizon Healthware's electronic medical record/clinical documentation software for Personal Care Services agencies. It provides easy to use point-of-care data entry of PCS assessments and clinical notes onto computerized versions of familiar charting forms, allowing agencies to move away from repetitive writing of paper charts toward a computerized medical record.

Nurses with a laptop can complete their visit notes for Aide Supervision, create the Aide Care Plan, and fill in the PACT form – all while out in the field. Information that's already in the PROMISE system – such as the client's name, address, diagnosis, and medications – is pre-filled to eliminate repetitive work. Back at the office, it's easy to print a task sheet/visit record, based on the nurse's Aide Care Plan, which guides the aide's activities during the next week's visits and doubles as the aide's time sheet and visit record for billing and payroll. PACT forms are also easily printed in perfect DMA-3000 format from the data collected on the nurse's laptop.

Answer PACT form questions on ClinicPro's intuitive screens, click Preview to see how it will look as the standard 4-page DMA-3000. "Sign" the form digitally, then back in the office, print the actual form to send out for physician signature – the form is logged in the PROMISE document tracking system as an open item.

What's in ClinicPro PCS?

- PACT (DMA-3000)
- Progress note
- Supervisory Visit note
- Aide Care Plan creation
- Aide task sheet/visit record
- Case conference
- Chart review
- Track PACTs out for signature

ClinicPro creates an easy-to-read care plan printout from the plan set up on the nurse's computer. Aides take this for each of their clients as the visit flow sheet, with fields on the last page for logging the visit time and activity code to turn in as a timesheet – OR – if the agency utilizes a telephony system to capture aide activity, an interface module can pull that data from the time capture system into PROMISE for billing.

ClinicPro is fully integrated with the PROMISE billing system, so information is entered once for data such as client name and demographics, diagnosis, and insurance info, then shared across all forms. Field staff has access to the complete medical record, including historical notes and careplans, for every client – not just their daily caseload.

Visit activity and supplies can be logged in ClinicPro by the clinician; data passes through for back-office verification, billing, and financial/productivity reporting.

Flexible deployment depending on your hardware budget and the availability of cellular coverage

 Use the computers you already have in the office, nurses still jot notes in the field but come in to create the care plan and PACT form – OR –

 Put laptops in the field with one, a few, or all nurses, use laptops in “detached” mode and connect back to the office periodically to upload data – OR –

 Use cellular cards in laptops so the data captured in the field is immediately stored to the main “server” computer in “real time”

 Utilize Horizon’s web-based “Software as a Service” (SaaS) option if you don’t have an adequate server computer at your agency for the additional programs & data of ClinicPro

Powerful Flexible Easy Unique	Clinic Pro
Familiar forms = fast adoption/short learning curve	
Full integration with billing – no duplicate work	
ALL client charts on every mobile device	
Real-time or daily synch - your choice	
Interface with scheduling, telephony, other time capture systems for a complete solution	

Call Regina at Horizon Healthware today to schedule a free 15-minute demonstration.

Prepare to be impressed!
